

NASAL FLU VACCINE

FOR SECONDARY SCHOOL STUDENTS

SAFE AND EFFECTIVE?

From 1st September 2023, all secondary school students in the UK will be offered Fluenz, a nasal spray vaccine for influenza.

Formerly FluMist, it was found to be only 3% effective in the 2016-17 flu season. It currently has **311,843 adverse events** reported on the WHO's official **vigiaccess.org** site, including Facial Paralysis, Heart Inflammation, Pericarditis, Brain damage, Meningitis, Encephalitis, Guillain-Barré and Streptococcus. Has your teacher told you that?

Read the full, official list of 1,000+ side effects

Go to WHO's vigiaccess.org, click "Search Database", enter "Fluenz".

Fluenz Ingredients

include Genetically Modified Organisms (GMO), arginine hydrochloride (pituitary gland stimulator), dipotassium phosphate (can cause vomiting and diarrhoea) and gelatin hydrolysate (ground up pigs' bones).

Short Clinical Trials with no Placebo

Fluenz is approved based partly on extremely short clinical trials. PMC4796333 followed participants for only 14 days, PMC4181477 for 13 weeks. Neither trial had used a placebo. Wikipedia defines experiments without placebo and double blinding as pseudo-science.

Their excuse is they use safety data from trials from previous years, since they are only changing the strain it targets. This is a dangerous approach. A new version could have completely different side effects.

Getting Colds and Flu is Normal

You already have a great tool to survive colds and flu, it's called *natural immunity*. You can supplement it with vitamins and minerals, a healthy diet including fresh fruit and veg, sunshine and plenty of exercise and sleep.

Did Fluenz Kill 19 Children?

In late 2022, Fluenz was rolled out to all UK primary school children. Just 4 weeks later, 19 children had died. The deaths were blamed on Strep A. However, Strep A is listed as one of the side effects of Fluenz. The govt. refuses to publish how many of these children took the nasal flu spray.

No Informed Consent - A Criminal Act

When administering medication, the patient must be informed about all side effects *beforehand*, and that no treatment is an option. If not, the medic is *breaking the law*, namely Montgomery 2015, a UK Supreme Court ruling, and can be charged with assault and battery.

Shedding: Stay away from anyone recently vaccinated.

Shedding is when a recently vaccinated person sheds vaccine particles through their breath, skin or by sneezing or coughing. PMC6695509 found that 78% of vaccinated participants were shedding vaccine particles. When the nasal flu vaccine is being given out, consider staying off school for at least 2 weeks. Arrange this with your parents and the school. See the link below for a template letter.

Parents: Are you aware? Gillick Competence:

This is a law from 1985, where any young person aged 12-17 can be given medical treatment in secret, *without the permission or knowledge of their parents*. Talk to your child about the risks from side effects of the unnecessary medication such as the nasal flu vaccine.

And the Manufacturer of Fluenz is ...

... Astra Zeneca. Remember them? The AZ covid injection was banned by EU countries from March 2021 onwards, due to the risk of blood clots. The families of Dr. Steven Wright and many others, confirmed killed by AZ, have received £120k compensation payouts.

Is Fluenz Vegetarian, Vegan, Halal or Kosher?

No. It's manufactured in chicken eggs and chick kidney cells, and contains pork gelatin.
